

Human Resources Analytics Dashboard – Task 2 Report

Project Overview

The HR Analytics Dashboard is an interactive Power BI dashboard developed to analyze employee data and workforce trends.

The dashboard helps understand employee distribution, salary patterns, satisfaction levels, department analysis, and attrition trends.

Dataset Information

Dataset Name: HR Analytics Employee Dataset

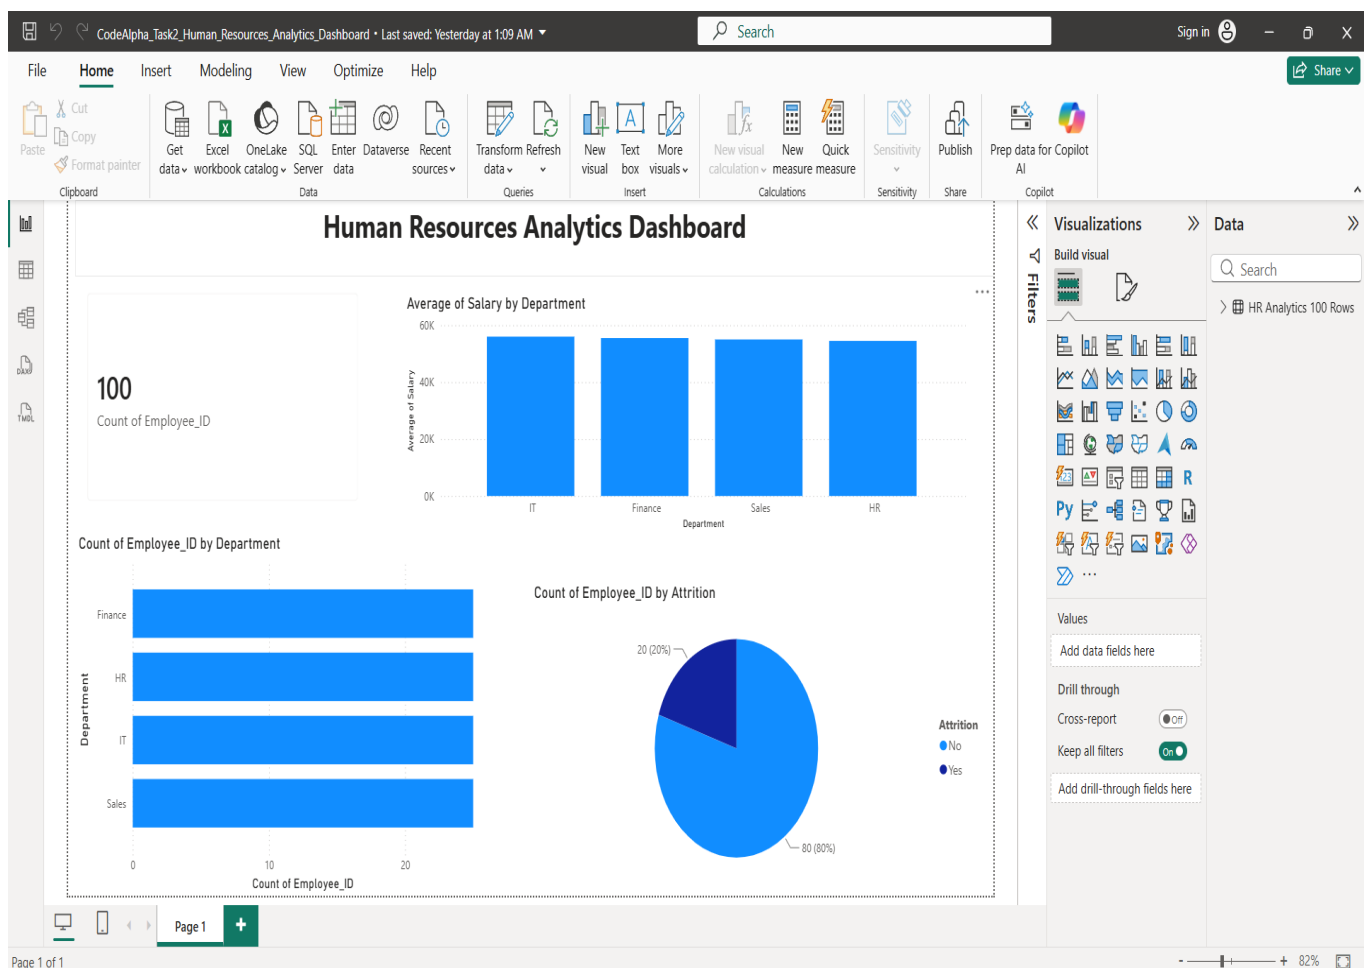

The dataset contains:

- Employee ID
- Name
- Age
- Department
- Job Role
- Salary
- Experience Years
- Attrition
- Satisfaction Score

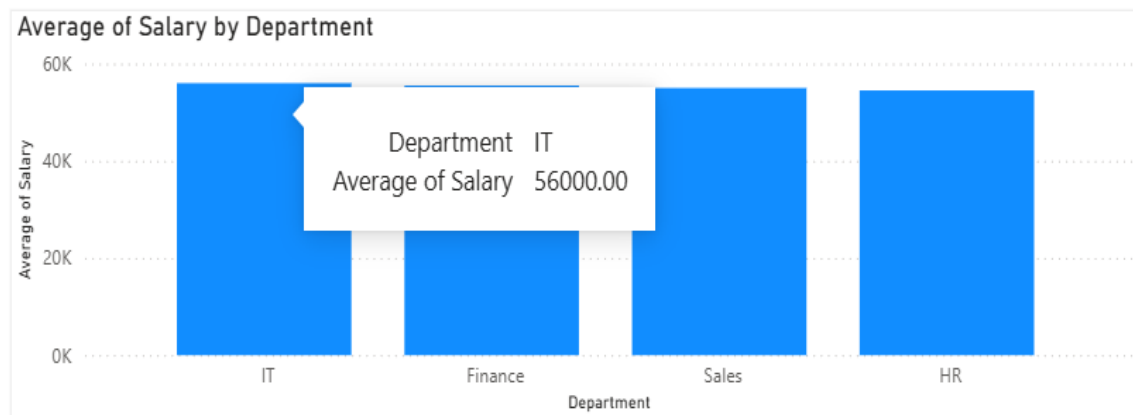

Tools Used

- Power BI Desktop
- Excel Dataset
- Data Cleaning
- Data Visualization
- Data Analysis

Dashboard Overview

Average of salary Analysis

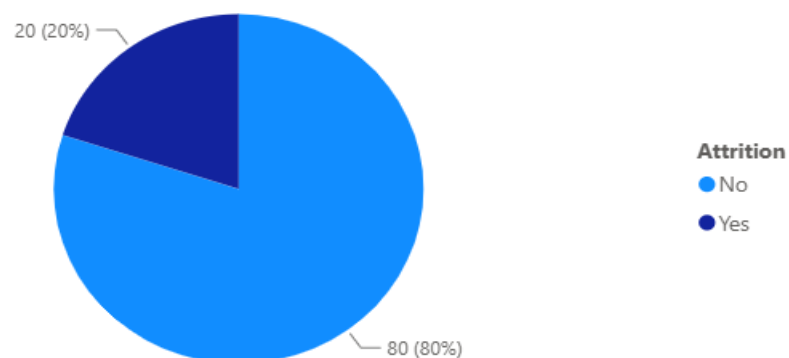

Count of Employee_ID Analysis Department

Count of Employee_ID by Department

Count of Employee_ID Attrition

Count of Employee_ID by Attrition

Key Performance Indicators (KPIs)

- Total Employees
- Average Employee Age
- Average Salary
- Employee Attrition Analysis
- Department-wise Employee Distribution

Dashboard Analysis

Attrition Distribution Analysis

The dashboard analyzes employees who stayed and employees who left the organization.

Employees by Department Analysis

The dashboard compares employee count across departments.

Salary Analysis

The dashboard provides insights into employee salary distribution.

Key Insights

1. The dashboard provides complete employee workforce analysis.

2. Department-wise employee distribution helps understand workforce structure.
3. Attrition analysis helps identify employee retention patterns.
4. Salary analysis helps understand compensation distribution.
5. HR teams can use these insights for better workforce planning.

Conclusion

The HR Analytics Dashboard provides meaningful insights into employee demographics, attrition trends, salary patterns, and departmental distribution. It helps organizations improve employee management and make data-driven HR decisions using Power BI.
